

ACKNOWLEDGMENTS

The present study is a revised version of my dissertation completed in 1990 at Columbia University. In the course of this study, my family and friends have provided continuous support for which I am always grateful. I would like to thank Professor Jeanette Wakin for her helpful suggestions. I am indebted to Professor E. S. Kennedy for his careful reading of my work and his generous comments on it. My special thanks go to my teacher Professor George Saliba who suggested the topic in the first place, worked with me closely on the project, and offered his guidance and encouragement from start to finish. I remain, however, solely responsible for any shortcomings in this book.
