

## Acknowledgements

During almost 20 years the author has studied the family Scythrididae and during that time many colleagues have kindly sent specimens for determination or given information about their experiences.

The author is especially indebted to the late Mr. Eberhard Jäckh, Hörmanshofen, who some years ago donated a collection of Xerox copies of his photographic file of genitalia slides. Sincere thanks also are due to Mr. Ole Karsholt, Zoologisk Museum, Copenhagen, who for many years has generously forwarded scythridid specimens collected by him or by people associated to the museum; and to Prof. Pietro Passerin d'Entrèves, University of Turin, who has been very helpful concerning taxonomic and nomenclatural problems, and has also contributed three new descriptions and several synonymizations. A special thanks is extended to Dr. Jean-François Landry, Biosystematics Research Centre, Ottawa, Canada, who provided many interesting results on systematics during his work with the Nearctic scythridid fauna, eventually presented in his thesis in 1991. The author also wishes to thank the following persons for gifts or exchange, for loan of specimens, for information and stimulating discussions, or for giving access to museum collections:
