

LIST OF TABLES

1.1	Table of concordance between manuscripts D and P	37
2.1	The mixed retes of al-Sijzī and al-Bīrūnī	71
T.1	For constructing altitude $<$ and azimuth $>$ circles for latitude 36°	233
T.2	Table for constructing the azimuthal quadrant for latitude 36° north	240
T.3	$<$ Table for constructing the <i>shakkāziyya</i> $>$	270
T.4	Table of the radii	271
T.5	Table for constructing the (nocturnal) <i>musātira</i> for latitude 36°	282
T.6	Table of the altitude of the hours from latitude zero to latitude 48° , by approximation, and for (timekeeping with) the sun. This (table serves) to make the marks on the ‘locust’s leg’.	288
T.7	Table of the shadow of the hours from latitude zero to latitude 48° , by approximation, and for (timekeeping with) the sun. These are the (shadows) on which (the instruments of the category) <i>mīzān</i> are based	289
T.8	Shadow of the hours / shadow at the ‘ <i>aṣr</i> ’ / altitude at the ‘ <i>aṣr</i> ’	292
T.9	Table of the vertical shadow of the hours	293
T.10	Table for the construction of the altitude circles for latitude 48° north and south.	294
T.11	Table of the altitude of the hours, for (timekeeping with) the sun and with the stars whose declinations are smaller than the obliquity of the ecliptic	303
T.12	Table (for constructing) the horizontal sundial for latitude 36°	307
T.13	Table of the horizontal and vertical shadows of the hours, the shadows of the beginning of the ‘ <i>aṣr</i> ’, and their azimuths, at the beginning of the zodiacal signs	309
T.14	Table of the altitude at the hours and their ‘times’ (i.e. time-arc), of the altitude at the ‘ <i>aṣr</i> ’ and its end, and of the rising amplitude at the beginning of the zodiacal signs	310
T.15	Tables for constructing the ‘ <i>aṣr</i> ’ for latitudes smaller than the obliquity	328
T.16	Table of the horizontal sundial for latitude $< 36^\circ >$	330

B.1	Najm al-Dīn's 'Table of Proportions'	358
C.1	Najm al-Dīn's Star Table, with recomputation of the ecliptic coordinates from the equatorial ones	360
