

FIGURES AND TABLES

FIGURES

2.1	Results from a confirmatory factor analysis for a two factor model of religious commitment. Results for 13 countries from the EVS/WVS studies in 1981, 1990, and 1999/2000	44
3.1	Cross-national differences in pro-marriage attitudes	70
3.2	Cross-national differences in pro-motherhood attitudes	71
3.3	Cross-national differences in views about homosexuality	73
3.4	Cross-national differences in views about abortion	73
3.5	Cross-national differences in views about divorce	74
3.6	Cross-national differences in views about adultery	74
3.7	Cross-national differences in sexual values	75
3.8	Generational divide in pro-marriage attitudes	78
3.9	Generational divide in pro-motherhood attitudes	78
3.10	Generational divide in sexual values	81
5.1	Trends in equality versus freedom, based on opinion balance measure	126
5.2	Trends in libertarian/authoritarian values	129
5.3	Trends in materialist/post-materialist values according to the four-item battery	132
5.4	Cohort differences in emphasis of equality versus freedom. Differences between the war and the two other cohorts. Means for the three surveys	134
5.5	Cohort differences in libertarian/authoritarian values	138
5.6	Cohort differences in MPM values	140
5.7	Mean value for 11 countries on the MPM index for different cohorts in each of the surveys	140
6.1	General tolerance—development over time across countries	165

6.2	Intolerance towards ‘social deviants’—development over time across countries	166
6.3	Intolerance towards foreigners—development over time across countries	167
6.4	Intolerance towards political extremists—development over time across countries	168
6.5	Intolerance towards ‘social deviants’ by generation, wave, and country	172
6.6	Intolerance towards foreigners by generation, wave, and country	172
6.7	Intolerance towards political extremists by generation, wave, and country	173
10.1	German values for Hofstede	256
10.2	Ideal Schwartz Value Circle	257
10.3	Schwartz Value Circle—Germany (West) ESS 2002 ...	258
10.4	Schwartz Value Circle—ZUMA experiment 2004 (West only)	258
10.5	Inglehart’s index ALLBUS 2004 & ZUMA 2004 experiment	259

TABLES

2.1	Changes in belief-oriented religion in 13 countries	45
2.2	Changes in church-oriented religion in 13 countries ...	46
2.3	Changes in over-all religious involvement in 13 countries	47
2.4	Religious involvement, moral strictness, and civic-society involvement in 1981, 1990, and 1999/2000 in three generations	48
2.5	Changes in the levels of compartmentalization between religious involvement and two secular orientations among 13 countries	50
2.6	Standard deviations for religious involvement in 1981 and 1999	53
3.1	Pro-marriage attitudes	71
3.2	Pro-motherhood attitudes	72
3.3	Sexual values	76
3.4	Pro-marriage attitude by generation and wave	79

3.5	Pro-motherhood attitude by generation and wave	80
3.6	Sexual values by generation and wave	82
3.7	(Logistic) Regression of importance of marriage, importance of children, and sexual values on country dummies, sex, marital status, employment status, religion, church attendance, study waves, and generations	84
4.1	Fifteen EVS work values, coded on facets	97
4.2	Extrinsic work values	99
4.3	Intrinsic work values	101
4.4	Extrinsic work values by generation and wave	103
4.5	Intrinsic work values by generation and wave	105
4.6	Regression of intrinsic and extrinsic work values on country dummies, sex, employment status, study waves, and generations	109
5.1	Indicators for economic left-right values	122
5.2	Indicators for New Politics values	123
5.3	R ² and change in R ² from forced stepwise regressions with the value measures as dependent variables	144
6.1	General tolerance	162
6.2	Intolerance towards specific groups	163
6.3	General tolerance by generation and wave	170
6.4	Intolerance towards specific groups by generation and wave	171
6.5	Regression of intolerance towards ‘social deviants’, foreigners and political extremists on country dummies, sex, marital status, employment status, religion, church attendance, waves, and generations	174/175
7.1	Volunteering 1981–1999: doing unpaid work for at least one of eight types of organizations	186
7.2	Summary statistics on volunteering, 1981–1999	187
7.3	Generational differences in volunteering and the extent to which they explain differences between years	189
7.4	Relation between volunteering and the importance attached to six life domains, 1999	192
7.5	Relation between volunteering and work values, 1999 (adjusted odds ratios ^a)	194

7.6	Leisure values: their valuations by the Dutch population aged 16 and over by three generations	196
	Appendix Table 1 ‘Currently doing unpaid voluntary work’ for eight types of voluntary organizations/fields of activity	202–203
	Appendix Table 2 Volunteering in three population surveys	204
	Appendix Table 3 Relation between the importance attached to six life domains and volunteering, 1999	205
8.1	Gini coefficients	211
8.2	Mean of the maximum income ratio by country and year	218
8.3	Standard deviations of the maximum income ratio by country and year	220
8.4	Mean of the maximum income ratio by country, year, and cohort	222
8.5	Pooled and separate country regressions of maximum income ratio on cohort, age group, year, country, and year country interactions	223
10.1	Means and standard deviations of the five BFI-10 scales	261
10.2	Intercorrelations of the BFI-10 scales	261
10.3	Correlations between Hofstede’s and Schwartz’s value dimensions	262
10.4	Correlations Schwartz’s dimensions—Inglehart Index	263
10.5	Correlations Hofstede—Big Five	264
10.6	Correlations Big Five—Schwartz	265
	Appendix Table 1 Value types and value items	271
11.1	Unadjusted explained variances and significant variables	288
11.2	Number of significant effects of Hofstede, Schwartz, Inglehart, personality types, and demographic variables	289
11.3	Regression of extrinsic work values on general values, personality types, and demographic variables	291
11.4	Logistic regression of marriage outdated institution on general values, personality types, and demographic variables	292–293

11.5 Regression of sexual values (Sexval) on general values,
 personality types, and demographic variables 293–294

11.6 Regression of left-right-scale on general values,
 personality types, and demographic variables 295

11.7 Regression of importance of God on general values,
 personality types, and demographic variables 296–297

11.8 Total and additionally explained variance by general
 values, personality types, and demographic variables in
 regression of key domain-specific variables 298
